## 1953-62 WeatherShield® Car Cover

- "The" Ultimate Car Cover Fabric
- Repels Water Better, Keeps Car Dryer, Packs Small And Light, Dries Quickly

The WeatherShield® Car Cover manufactured by Covercraft is the standard in top of the line car covers. It keeps your Corvette dryer, is softer against your paint's fine finish, dries faster and breathes better than anything on the market today. Combine that with the fact that it has special UV inhibitors and you've got an unbeatable combination. Technically speaking the fabric is different because the one-layer fabric goes thru the Nextec® encapsulation process which non-technically speaking is the very best way to make an extraordinary fabric. In fact this process also gives this fabric a 9 out of 10 rating for simple dust protection too! The WeatherShield® cover has these quality features; double stitched seams, neoprene elastic front and rear for a snug fit and reinforced, non-scratch grommets for optional lock.

## 1953-62 Mosom Plus™ Barrier Cover

- Filters Out Dust
- Non Scratch, Soft Inner Lining
- Lightweight And Durable

Mosom Plus™ is a four layer material. The outer two layers are Spunbond Polypropylene, the middle layer is a special micro-porus film and the inside layer is super-soft fabric. The middle layer is an excellent rain barrier, while allowing for vapors to pass through. The special cotton flock inner layer pampers the most delicate paint finish. It is a great choice for all-around car cover use, suggested for most conditions except extreme sun, snow or ice. Mosom Plus™ is a non-woven material, so in the unlikely event a rip occurs in the material, it will not run.

## Laser Shield® License Cover

- Diffuses Incoming Laser Beams
- Does Not Obstruct View Of License Numbers

Laser guns emit a laser beam which is bounced off a flat, perpendicular, metallic, reflective surface on your vehicle. This specially designed cover works to absorb and diffuse the incoming laser beam. Significantly shortens the effective distance of laser guns. Note: Buyer assumes all responsibility for using this product in compliance with local motor vehicle codes.

## 1958-62 Console Tunnel Insulation

- Greatly Reduces Cockpit Heat
- Fits Under Console Trim & Carpet
- Easy To Install

As the owner of a 1958-62 Corvette you know the cockpit can get extremely hot. In fact, 1958-62's didn't even have tunnel insulation. Now you can add insulation that incorporates today's technology in an easy to install insulation that doesn't require getting under the car. Simply remove the console trim, peel back the carpet and use 3M Spray Trim Adhesive (P/N A5409) to glue the insulation in place. The insulation is precut so no trimming is required. Made of a fiberglass composite and joined to an aluminum skin, you'll find this insulation makes a big difference in interior temperatures.

## 1962 Dura-Last Tach Cross Gear Kit

- With OE Distributor
- Eliminates Tachometer Failure
- Won't Destroy Mainshaft Gears
- Stainless Steel Or Bronze Construction

Before your stock tachometer drive gear destroys the distributor mainshaft, replace it with our Dura-Last Tachometer Cross Gear Assembly manufactured by High Tech Innovations. The factory tachometer drive gear doesn't get adequate lubrication causing metal to metal friction between it and the coupler. Then the drive gear seizes, shearing the teeth off the distributor mainshaft. Our Dura-Last gear assembly eliminates this problem because we put needle bearings between the gear and coupler. The bearings won't wear out and stay lubricated for a lifetime. Installation of the assembly takes about 5 minutes with regular hand tools.

## 1960-62 ACDelco **ACDelco** Ignition Parts

- Choose The Best

Each ACDelco ignition part is designed to perform. Even a simple condenser, if changed for another brand, can significantly upset the output of the ignition system. For example, the ACDelco pigtail is a very exacting length to provide the correct performance output of the points. Also, the points have a specially weighted arm to effectively work in concert with the distributor cam at all speeds. Even the ACDelco rotors are balanced so the performance curve is exactly right for your particular engine.

## 1962 HEI Distributor Conversion

- Converts Dated Ignition Systems To Modern HEI Technology
- Easy To Install
- Improves Engine Performance

Now with a simple distributor swap you can get all the benefits of HEI technology plus performance enhancements on top of the original HEI. For example the original HEI had a 38,000 volt module, pickup and coil, this unit provides 50,000 power packed volts! The original system had bushings in the housing, this model has needle bearings for smoother operation and longer life. Plus, this one-piece distributor has a 4340 hardened steel cam gear for use with all roller cams and brass terminals in the distributor for greater conductivity than the stock aluminum terminals. So when you compare this tach drive distributor to what your car came with you're getting a tremendous hi-performance distributor that eliminates the points and coil and gives you all the firepower you need for your Corvette's ignition. This unit simply bolts into place, all you have to do is run a 12 volt power lead to the distributor and add upgrades

### 1955-62 Competition Cams' High Energy Cams, Lifters & Springs

As the one component in your engine that has the greatest effect on power, torque and mileage, Competition Cams' has designed 2 unique camshafts. They have the 260 & 268 series for 55-62 small block Corvettes. Each camshaft, lifters, and springs are described below.

**260 High Energy Cam (Small Block):** This cam is perfect for Corvette owners who want more power without affecting driveability. The 260 is very responsive and is an ideal replacement cam in 283/327 engines. The 260 produces up to 10 horsepower over the stock engine and is used on Corvettes with a 3.08 or greater rear axle ratio. Specifications are .446" lift intake and exhaust, 260 degrees duration at .006" lift, 212 degrees duration at .050" lift with 110 degree lobe centers.

**268 High Energy Cam (Small Block):** This cam is for the high performance enthusiast. The 268 produces up to 15 horsepower over the stock engine. This cam has a slight lobe at idle but does not affect power accessories. The 268 will idle down to 600 RPM and still pull strong past 6,000 RPM. The 268 is an ideal replacement in 327 engines. Specifications are .460" lift intake and exhaust, 268 degrees duration at .006" lift, 218 degrees duration at .050" lift with 110 degree lobe centers.

**High Energy Lifters:** When installing a new cam, installation of new lifters is a must! Use of old lifters voids the cam warranty.

**High Energy Valve Springs:** When installing a 260 small block cam, use stock valve springs if they still maintain their like-new pressures. In cases where the stock springs have lost their tension or for all other cam installations, use Competition Cams' High Energy Valve Springs.

## 1955-62 Fidanza Manual Transmission Aluminum Flywheels

- **Ideal For Unleashing Your Engine's Full Power (Approximately 25 Horsepower)**
- **Upgrade Over Stock Flywheel Offering Superior, Replaceable Friction Surface**
- **Perfect For Spirited Driving Because Flywheel Decelerates Quicker When Disengaged Allowing You To Match Revs Sooner**

For years and years savvy tuners and racers have used aluminum flywheels for improved performance. Fidanza's hi-performance 10-13.5 lb. flywheels will give you an instantaneous improvement in performance and is an instant upgrade over your stock flywheel. Fidanza's 6061 T6 billet aluminum flywheels are SFI approved, have a completely replaceable 1050 high carbon alloy steel friction surface and a steel ring gear.

Footnote: Lightweight flywheels are an excellent way to distribute the horsepower that an engine creates more efficiently.

Aluminum flywheels will without a doubt add much more performance to your engine. Because factory built flywheels are so heavy it takes an immense amount of power just to get it rotating. To rotate the factory flywheel from 1000 rpm to 6000 rpm can take as much as 40 horsepower. That same application with an aluminum flywheel, because of its lighter weight, takes less than 15 horsepower. This means that the horsepower the engine is saving is actually sent to the wheels and not spent rotating the heavy steel flywheel. If you're wondering about the drawbacks, there are none. With all the benefits of the lightweight flywheel, driveability is virtually unchanged and in most cases improved. Whether the car is your daily driver or a pure race machine, Fidanza flywheels are a great choice.

## 1956-62 Ram Premium Clutch Kits

- **Upgrade Over Original Equipment**
- **Pressure Plate, Disc & Throwout Bearing**

Clutch Kits are matched pressure plate, clutch disc and throwout bearing sets that have been designed for engines that have been mechanically upgraded over stock. These sets are direct replacements for stock assemblies and require no additional effort in driving. The additional torque capacity of these clutches is the result of a much improved clutch disc friction material that can withstand the added power output and aggressive driving style of today's mildly modified street combinations. Each set includes a pilot tool to make alignment of the disc a snap.

## Battery Tender

- Safe, Reliable, Trouble Free Battery Care
- Developed To Maintain Batteries Not In Constant Use Or Storage

Automatically switches off after fully charging to storage charge constantly monitors the battery without the damaging effects of trickle charging. The initial charge cycle of the Battery Tender brings a battery to a full charge at approximately 14.4 volts about 1.25 amps. After a full charge is reached, the Battery Tender automatically converts to a float charger and monitors the battery at 13.6 volts. Although there is a constant voltage of 13.6 volts being applied to the battery, it is doing so at very little or no current. What this means to the user is safe, reliable, trouble free battery care. Equipped with 6' power cord, and 6' output cord with clamps, 5 year warranty.

Like all Battery Tenders, it has a microprocessor (brain) that controls the charging of each battery so that your battery doesn't get "cooked" the way conventional chargers can do.
